# VAROX ${ }^{\circledR}$ DBPH-50-EZD and VAROX DBPH-50 SG 

## Peroxide Accelerators in Silicone

VAROX DBPH-50-EZD is an easily dispersible version of VAROX DBPH-50 that vulcanizes or crosslinks most elastomers and polyolefins, such as EPR, EPDM, NBR, PE and silicone. The dispersion of VAROX DBPH-50-EZD is particularly effective in low durometer compounds. It provides translucent cross-sections in un-pigmented silicone rubber.

VAROX DBPH-50 SG is a $50 \%$ active VAROX DBPH dispersed in silicone gum. This product form improves the peroxide's incorporation during silicone mill mixing, and eliminates the problems involved in of handling a powder and the waste of fly loss. VAROX DBPH-50 SG is a crosslinking agent specifically intended for silicone and fluorosilicone polymer formulations. This unique formulation eliminates dust production during mixing and allows VAROX DBPH-50 SG to be used in transparent silicone compounds.

## VAROX DBPH-50-EZD and VAROX DBPH-50 SG Peroxide Accelerators:

- Perform equivalently to VAROX DBPH
- Provide the clarity of liquid in an
- easily dispersible powder form (EZD) or an
- easy to handle silicone gum (SG).
